Continuation of 11. does NOT place the application in condition for allowance because: The Applicant argues that the proposed combination of Fleck and Goodman does not teach or suggest "a pointing device configured to move a pointer" and "a plurality of cursor keys configured to move a cursor". The Examiner respectfully disagrees. The Examiner reads "pointer" and "cursor" as being the same thing. Furthermore, the claim does not distinguish "a pointer" from "a cursor". The Attorney also argues that "by replacing [Fleck's] arrow buttons with additionally buttons for moving the cursor, the proposed combination makes the device of Fleck unsuitable for its intended purpose, which is to provide a compact device with an efficient way of displaying and selecting information." The Examiner respectfully disagrees. Firstly, the Examiner never stated that the arrow keys taught by Fleck would be replaced with the cursor keys taught by Goodman. The Examiner simply modified Fleck by adding the cursor keys taught by Goodman. This addition of cursor keys adds functionality to the device taught by Fleck. Finally, the addition of cursor keys will still yield a device that is compact. As to the argument that there is no basis for the alleged assertion that continously holding down a cursor key will advance the cursor key will advance the cursor key will advance the cursor to the next page.
